- Geo-metallurgical Studies
- Project Evaluation
- 3D Modeling
- Mineral Resource Estimates
- NI 43-101 Technical Reports

(more information at [www.plr-resources.com](http://www.plr-resources.com))

## Job Overview:

We are looking for a geologist or Geology Engineer to join our team. The candidate will be primarily working on exploration and mining projects for various clients. Some mandates will require traveling, where others can be carried out from a home office (or from anywhere in the world).

The schedule is highly flexible depending on the work requirements and location of each project.

Lodging and meals will be provided if the tasks assigned require an overnight away from home.

Primary duties will be related to field work, drilling supervision, and core logging. But the candidate will benefit from the vast experience of the entire PLR Team. If the candidate shows interest in, and shows capabilities to, any other service offered by PLR, a mentoring program can be jointly built between the candidate and Management in order for the candidate to develop his/her career.

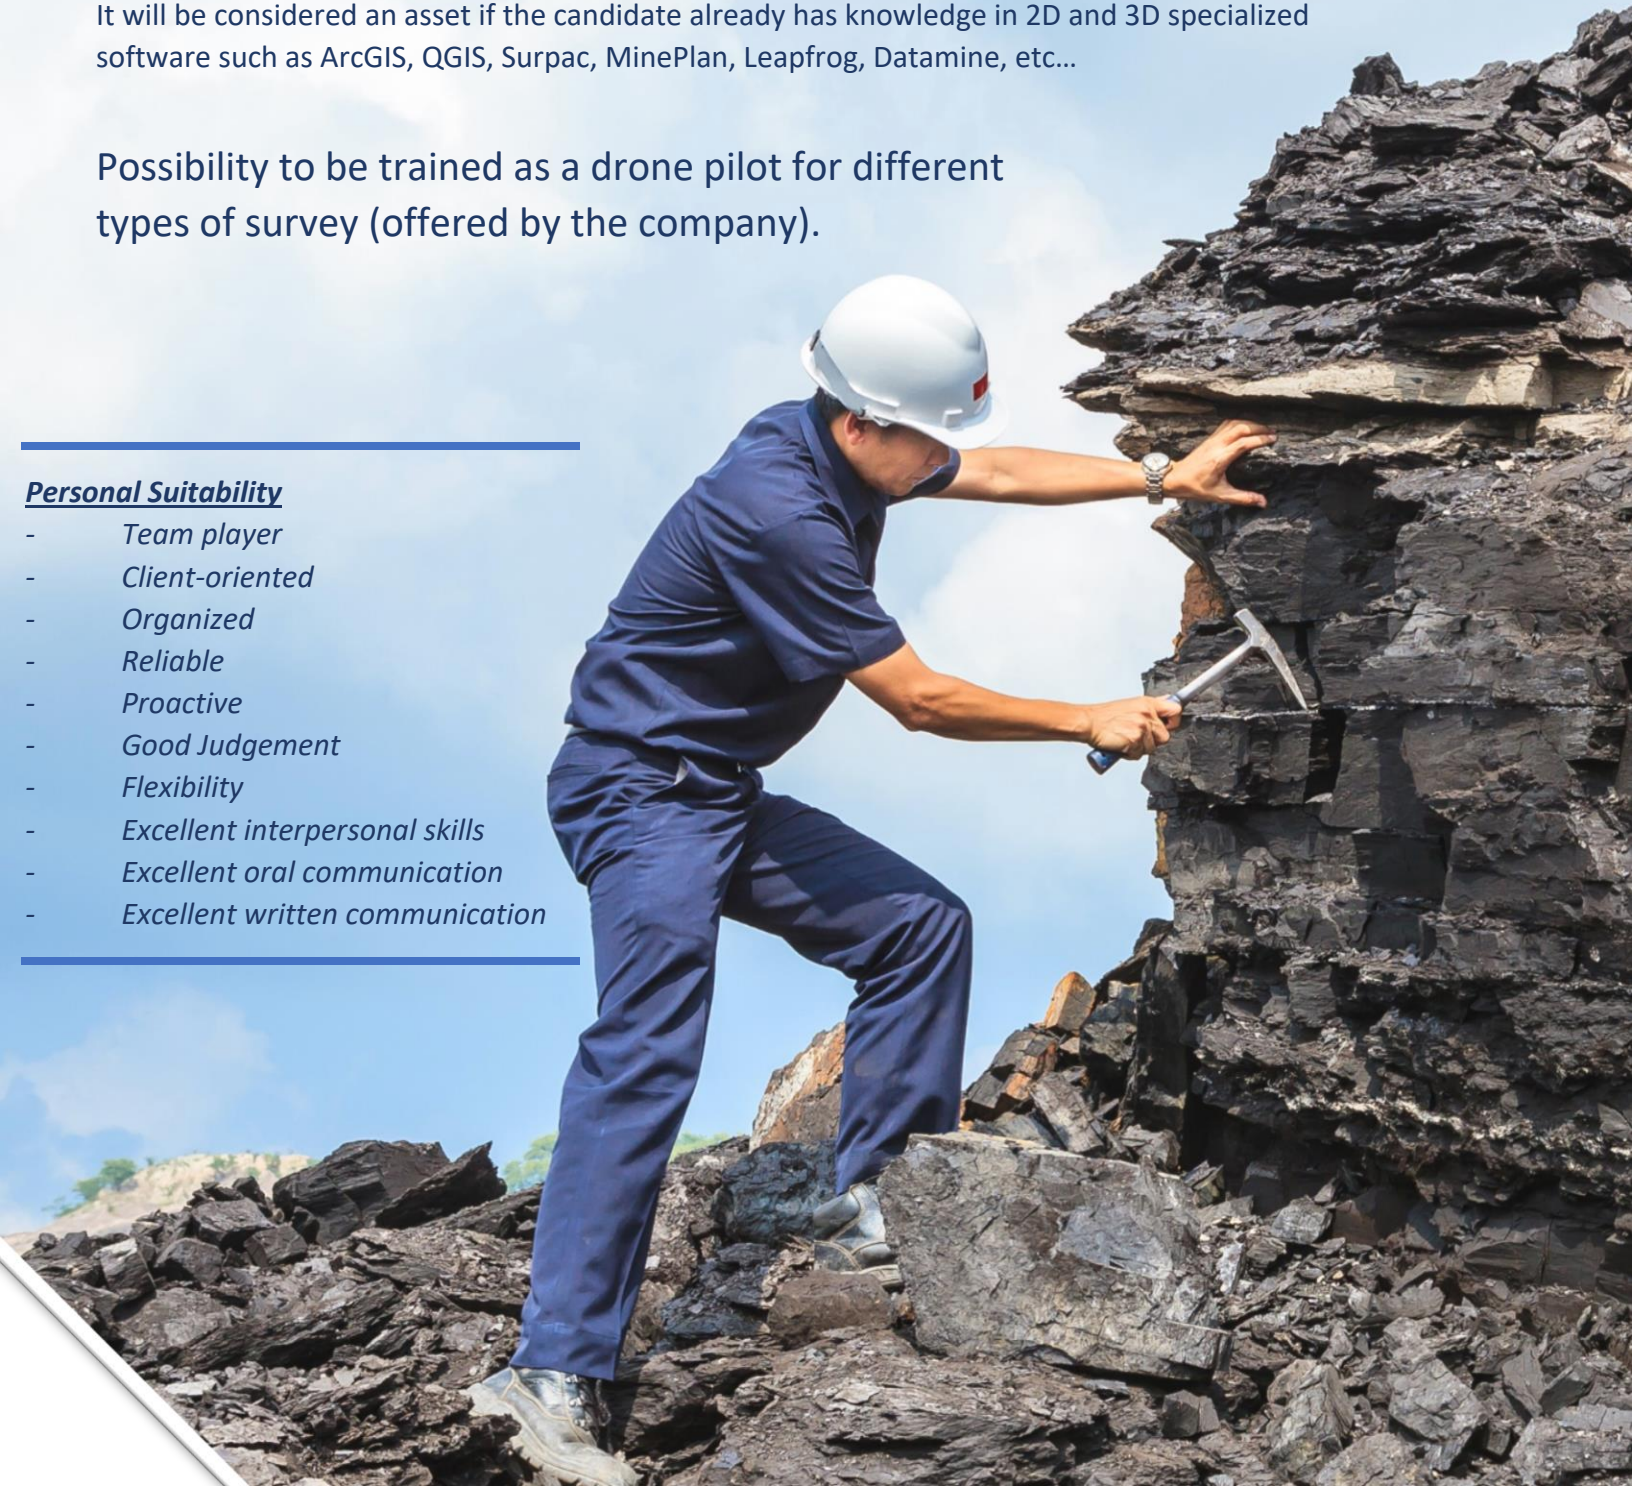

It will be considered an asset if the candidate already has knowledge in 2D and 3D specialized software such as ArcGIS, QGIS, Surpac, MinePlan, Leapfrog, Datamine, etc...

Possibility to be trained as a drone pilot for different types of survey (offered by the company).

---
